Hunter HGPLR Projection Screen

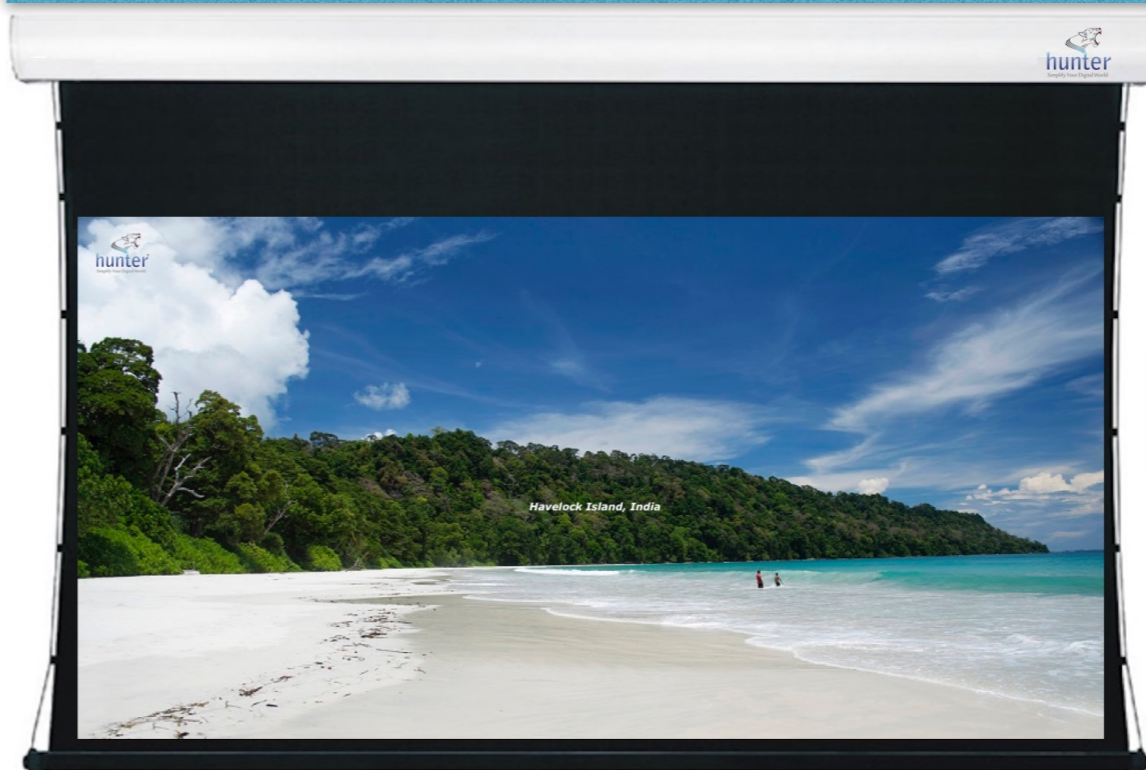

What is Hunter HGPLR Projection Screen

HGPLR stands for High Gain Polarised and Light Reducing Screen. Made with utmost precision using latest technologies, Metal 3D is a specialty material designed to optimise stereoscopic, two-channel 3D displays. Metal 3D employs special metallic elements formulated to preserve light polarisation. The high gain and high contrast of this fabric helps compensate for the losses incurred. Metal 3D offers a higher gain than competing fabrics with similar gain specificities. The open-close ratio of Metal 3D — otherwise known as the ratio of extinction — is the industry benchmark for front projection fabrics. This screen material is both high in gain and high in contrast, making it an ideal 3D fabric for a superior viewing.
